

SUMMARY

AI Engineer with experience building production-grade LLM applications, AI agents, and intelligent automation systems at AP Moller Maersk. Experienced in designing AI workflows using LangGraph, LangChain, LLM APIs, OCR pipelines, and data-driven architectures. Skilled in building scalable backend systems, retrieval pipelines, AI-powered analytics platforms, and deploying enterprise AI solutions.

EDUCATION

The National Institute of Engineering Bachelor of Technology - Computer science; GPA: 8.9	Mysuru, India 2021 - 2025
Macro Vision Academy Class - 12th; percentage: 90.8	Burhanpur, India - 2021

SKILLS

- Languages:** Java, Python, Javascript, Typescript, SQL
- Backend:** SpringBoot, Spring Data JPA, Spring Security, REST APIs, FastAPI, Node.js, Express.js
- Frontend:** React.js, Next.js, Vuejs, Html, Css, Tailwind, Redux
- AI:** Agentic AI, LLM APIs, OpenAI APIs, Gemini API, LangChain, LangGraph, AI Agents, Prompt Engineering, RAG Pipelines, LLM Evaluation, Embeddings, Vector Databases, OCR Pipelines, AI Automation
- Databases:** MySQL, MongoDB, Redis, Postgressql
- Cloud & DevOps:** Microsoft Azure (App Services, Azure DevOps), Docker, Kubernetes, Git, CI/CD
- Other:** gRPC, Jira, Azure, DevOps, Bruno, OAuth2, JWT, Kafka, Distributed Systems

EXPERIENCE

AP Moller Maersk Associate AIML Engineer	Fulltime Aug 2025 - Present
- Designed and deployed enterprise GenAI workflows processing 5,000+ documents/day using OCR, LLM-based extraction, and automated validation pipelines. - Build the langgraph insights agent which dynamically generates the analysis of over 6 millions tables of data. Generating interactive plots, deep-dive, and detailed reports - Designed reusable React components and streamlined rendering performance using memoization and efficient state management, effective use of browser storage, improving UI responsiveness. - Implemented evaluation workflows for LLM outputs focusing on response quality, accuracy, reliability, and hallucination reduction.	
AP Moller Maersk Full stack Developer	Internship Aug 2024 - Aug 2025
- Developed interactive, graph-based workflow visualizations in React, improving pipeline observability reducing incident resolution time by 30% for Azure Data Lake-backed systems. - Designed modular service-oriented architecture ensuring loose coupling between frontend and backend subsystems. - Implemented RESTful APIs and backend services, blended PostgreSQL and MySQL, and optimized queries to improve data retrieval performance by 35%.	

PROJECTS

Jarvis-AI Tools: Python, Googlesearch-python, Selenium, PyQt5, Web Scraping, Pyqtl, Gemini API, Speech Recognition, Text-to-Speech, - Built a multimodal AI assistant powered by Gemini LLM capable of real-time voice and text conversations. - Designed an agent-based workflow enabling automated task execution including web search, browser automation, file operations, YouTube search, weather/news retrieval, and image generation. - Integrated speech-to-text and text-to-speech pipelines to enable natural voice interaction. - Implemented tool execution architecture allowing the AI agent to dynamically select and execute external actions based on user commands.	Github
Blog-AI Tools: Nodejs, Python, Fastapi, Javascript, Reactjs, Redux, Mongoddb, GenAI, Gemini, JWT, Admin Based Authentication - Developed a full-stack blogging platform enabling users to create, edit, and manage blog content with an intuitive UI and secure backend in python. - Incorporated Google's Gemini API to auto-generate SEO-friendly blog titles and descriptions based on the user's content, reducing manual effort and improving content quality.. - Built secure REST APIs and scalable data storage architecture using MongoDB.	Github Live-Link
Airbnb clone Tools: Next.js, Tailwind, CSS, Typescript, Prisma, env variables, MongoDB, Vercel - Developed a full-stack Airbnb clone from scratch using Next.js for the front end, Prisma for database management, and MongoDB for data storage. - Designed and enforced a user-friendly interface replicating key features of Airbnb, including property listings, search functionality, booking system, user authentication. - Integrated authentication, protected routes, and booking workflows with backend APIs.	Github Live-Link
